Présentation du projet de site vitrine pour un

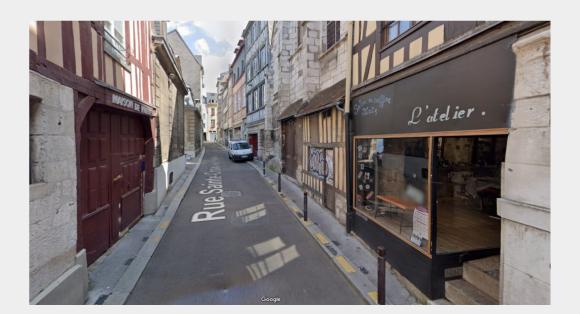

Coiffeur barbier

l'Atelier

Créé en 2017

1 dirigeant 2 employés

Cahier des charges

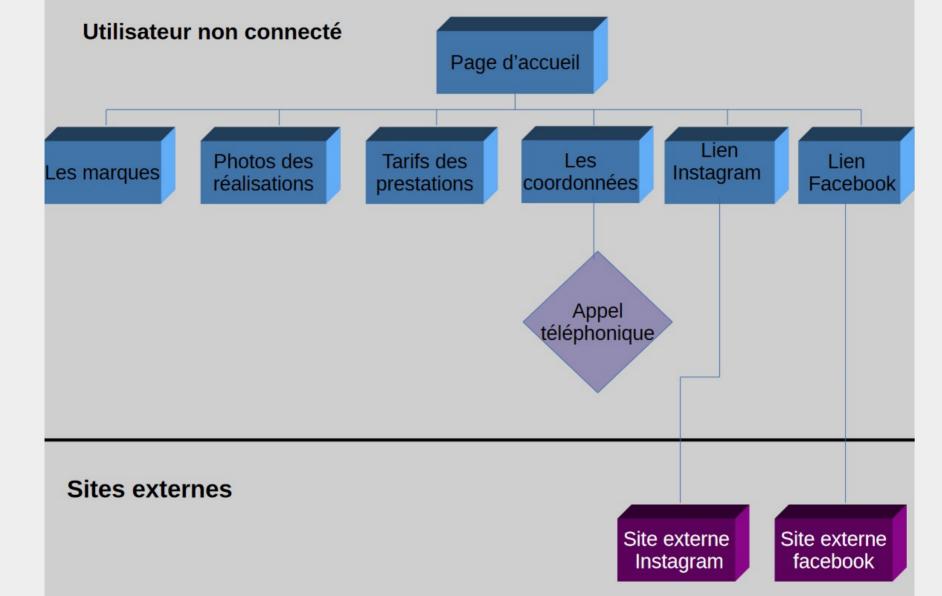

- Adresse avec Google maps, téléphone
- Ajout de photos de réalisations
- Tarifs des prestations
- Marques en vente au Salon
- Liens vers les réseaux sociaux de l'entreprise
- Création d'un logo

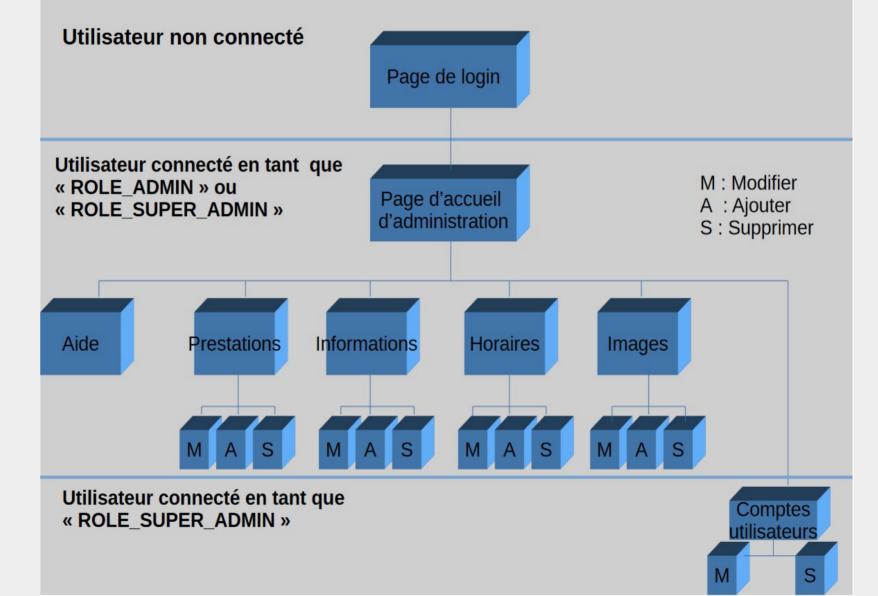

Spécifications techniques

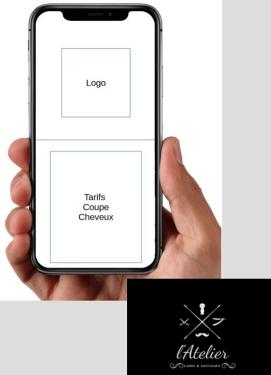

- Framework Symfony
- Easy Admin
- Vich Uploader
- Bootstrap

Logiciels et outils

- VS Code
- Git Github (SSH)
- LibreOffice
- Gimp
- Kanban

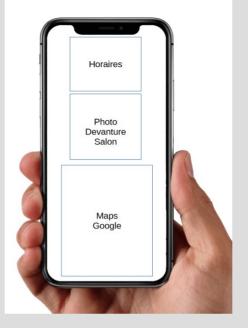

Coupes

27€

COUPE TRADITIONNELLE

details.

EasyAdmin relies on Symfony Security for everything related to security. That's why before restricting access to some parts of the backend, you need to properly setup security in your

- Symfony application:
- 2. Define a firewall that covers the URL of the backend.

Logged in User Information

When accessing a protected backend, EasyAdmin displays the details of the user who is logged in the application and a menu with some options like "loqout". Read the user menu reference for more

1. Create users in your application and assign them proper permissions (e.g. ROLE_ADMIN);

Restrict Access to the Entire Backend Using the access_control option, you can tell Symfony to require certain permissions to browse the URL associated to the backend. This is simple to do because each dashboard only uses a single

Information de l'utilisateur connecté

•Restreindre l'accès à toutes la partie back-end

•Restreindre l'accès aux éléments du Menu

•Restreindre l'accès aux Actions •Restreindre l'accès aux champs

Personnaliser les Voters de sécurité

Easy Admin repose sur la Symfony Security pour tout ce qui concerne la sécurité. C'est

pourquoi avant de restreindre l'accès à certaines parties du back-end, vous devez configurer convenablement la sécurité de votre application Symfony.

Information de l'utilisateur connecté

1 Créez des utilisateurs dans votre application et assignez leur des permissions appropriées.

2 Définissez un firewall qui concerne les URL du back-end.

Quand l'accès au back-end est protégé, Easy Admin affiche les détails de l'utilisateur loggé et un menu avec quelques options comme « déconnexion ». Lisez le Menu de

référence de l'utilisateur pour plus de détails.

Restreindre l'accès à toute la partie back-end

En vous servant de l'« access control option », vous pouvez dire à Symfony d'exiger certaines permissions pour naviguer sur les URL associés au back-end.

URL:
